Advantage:

The winding machine is controlled by a multi-functional single-chip microcomputer, and the data settings are easy to save for a long time;

The winding machine automatically arranges the wire, and automatically stops when the set number of turns is reached.

It has the function of parking at both ends, and the position of the wire axis can be adjusted by the teaching function;

It can assist the setting of winding point and width position, and can also input digital setting.

The wiring effect is good, the startup speed is fast, and the number of turns is accurate.
